

# ILLUMINATED MAP READER

tritium

With MEPROLIGHT's Map Reader You're Never In The Dark

MEPROLIGHT's Illuminated Map Reader lets you read any map in low light and severe weather conditions or at any other time when alternative light sources are unavailable. The Map Reader does not differentiate between the needs of sportsmen, military or law enforcement personnel. Its low level light emissions are not visible beyond a few meters from the user, protecting military users from detection under low light conditions.

## A Powerful Combination

By combining tritium light sources and a powerful magnifying lens, MEPROLIGHT's Map Reader provides illumination as well as magnifying the required area of the map. Focus on detailed areas of a map without missing topography lines and landmarks.

## MEPROLIGHT's Self-Illuminated Map Reader Features:

- Absolutely reliable means of map and document reading
- Illumination by tritium light sources - fail safe maintenance-free, self-contained power sources providing constant uninterrupted illumination under all weather conditions
- Power source, unlike batteries, operates in all temperature conditions
- Rugged construction with durable materials ensures longevity in a maintenance-free product
- Waterproof and impact resistant

## Technical Specifications

Weight:	100 grams (not including pouch)
Dimensions:	78mm (L) x 62mm (W) x 43mm (H)
Magnification:	1.5X.
External Finish:	non-reflective black
Illuminance:	575 millilux minimum
Light Output:	green standard, white optional
Minimum Service Life:	5 years.
